

## A-2SH

A-2SH is black and white negative isopanchromatic film for difficult lighting conditions. This film is successfully used in artistic photography for shooting in difficult lighting conditions and scenes with moving objects. Suitable for reportage and art shooting where you want to emphasize the grain. The sensitivity of ISO 400/28 ° and a large photographic latitude allow you to get very good results even with overexposure to half a stage (ISO 640/30 °) and underexposure by one step (ISO 900/33 °) without changing the mode of development. If necessary, the sensitivity of the A-2Sh film can easily be increased during the development process (PUSH process) to ISO 800.

## Application

For air and ground photographing with filming and photo-recording devices

### The main photographic properties:

Indicators	Value
Photosensitivity ( $S_{0,85}$ ) unit, no less	<b>350</b>
The limit of optical sensitization, nm, no more	<b>680 - 700</b>
The contrast ratio, no more	<b>1,05</b>
The veil of density, no more	<b>0,10</b>
Resolution $\text{mm}^{-1}$ , no less	<b>100</b>

**Dimensions:** with a width of 16mm - 15m, 30m, 60m, 120m, 122m, 300m, 315m.

with a width of 35mm - 10m, 12.5m, 30m, 60m, 120m, 122m, 300m, 315m.

The film is available in cartridge (35 mm, 36 exp.)

By agreement with the consumer, it is possible to produce films of other sizes.  
The film is produced perforated and non-perforated (by customer order)

**The warranty period of storage is 24 months.**
